CANImmunize: Working With Big Pharma On National Vaccination Certification, Medical Research

CANImmunize
Solutions
For Government
For Employers
CANImmunize Partners
Financial contribution from
Public Health Agency of Canada
Agence de la santé publique du Canada
The views expressed herein do not necessarily represent the views of the Public Health Agency of Canada

In Nova Scotia, as well as other areas, you can use CANImmunize to book your vaccine appointment. Do you think you need to? Well, perhaps reading through this information of their partners will be enlightening.

This company openly admits that your health data may be sold or used for research purposes. Now, identifying details will likely be removed, but it's still pretty underhanded. Not only is it receiving Government (or taxpayer) funding, but your data is likely worth money. In other words, the public financing its own invasion of privacy. More on that later.

CANImmunize is also part of the Vaccine Safety Network, which was established by the World Health Organization. It's a mixture of various Government agencies and pro-vaccine NGOs pushing the big pharma agenda. You will find an awful lot of overlapping names here.

CANImmunize describes itself as "Ottawa-based technology company specializing in immunization software. It developed the CANImmunize app, a pan-Canadian digital immunization tracking system that helps Canadians keep track of their vaccinations with a mobile app and web portal". In short, it's laying the ground work for a vaccine passport, despite how harmless this sounds. Interestingly, this was set up in 2012, long before this so-called "pandemic".

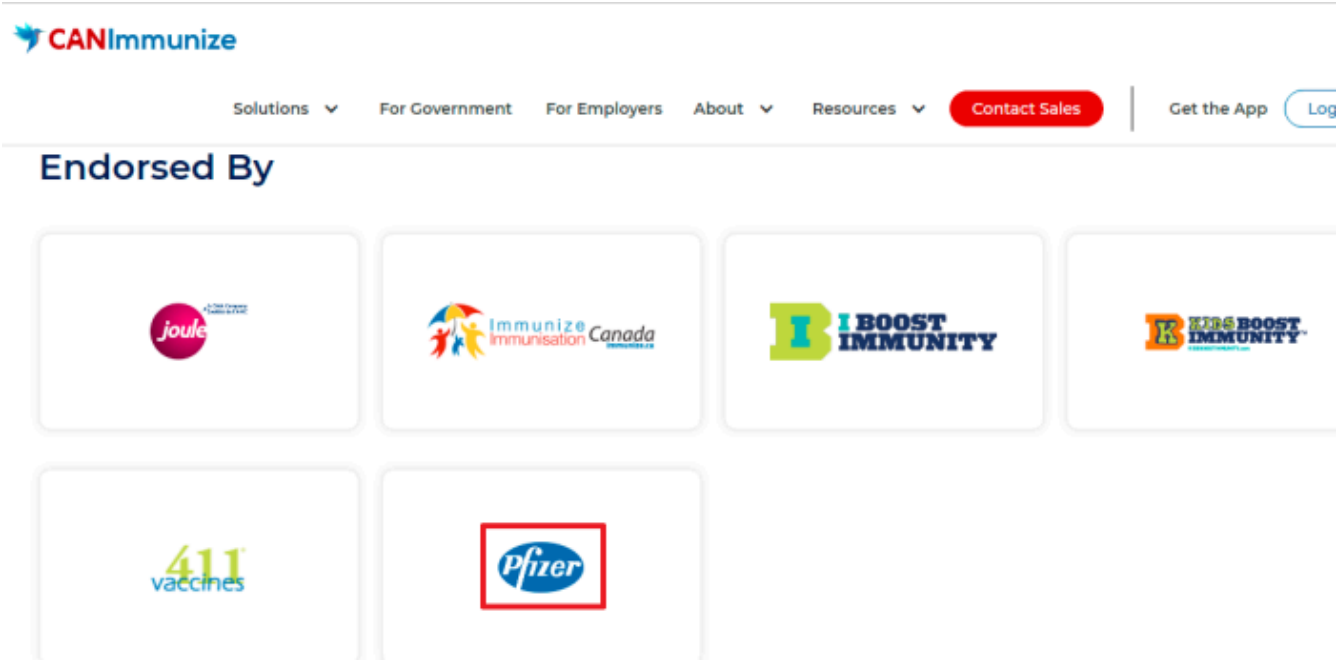
Incidently, PHAC, the Public Health Agency of Canada, isn't a Canadian entity. It was created by an Order In Council in 2004 to serve various World Health Organization functions.

For a walk down memory lane, the Vaccine Credential Initiative has been hard at work trying to get a global vaccine passport. The Government of Ontario is a partner organization. There's reason to fear that this is going to be the new ID required to move around.

Internationally Recognized
Public Health Agency of Canada
Agence de la santé publique du Canada
CANImmunize free digital immunization app recommended by the Public Health Agency of Canada (PHAC)
ecdc
Recognized by the European Centre for Disease Prevention and Control and Deloitte Global as a model for consumer-facing immunization solutions
vaccine safety net
Certified by the World Health Organization's VaccineSafetyNet

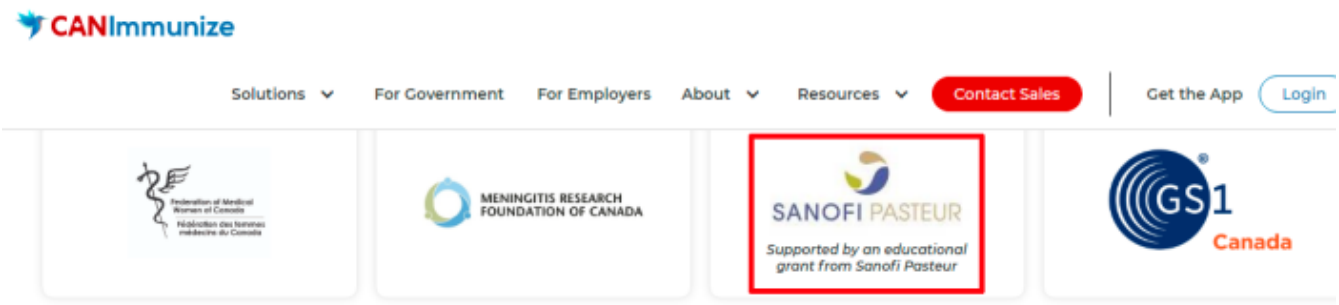
It's also recognized by the European Centre for Prevention and Disease Control, their equivalent of the CDC. That's just lovely. Now who else is responsible for advancing, funding, and promoting CANImmuize?

1. Pfizer A Major Sponsor/Endorser Of CANImmunize



Pfizer is a prominent sponsor and endorses of CANImmunize. This is a significant conflict of interest, considering that it's likely the biggest financial benefactor of the mass vaccination agenda. That said, this is only the tip of the iceberg.

2. Sanofi Pasteur Also Interested In This Venture

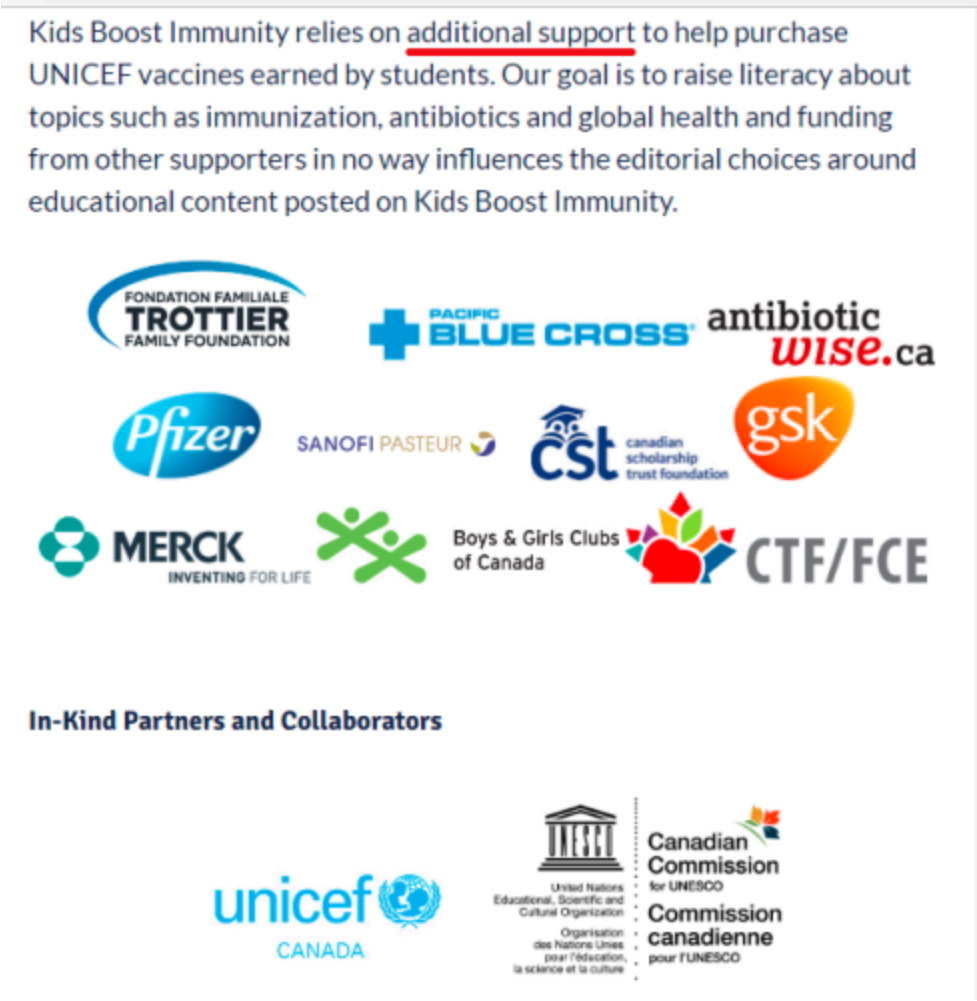


It's worth mentioning that Sanofi also provides indirect funding to CANImmunize, by financing and supporting their other partners. Perhaps this is a way to make it more difficult to see just how much money is coming in.

3. I-Boost-Immunity Endorser Of CANImmunize

IBoostImmunity has ties to UNICEF and the BC Public Health Association. It's sponsored by: London Drugs, Sanofi Pasteur, and Merck. London Drugs is a large chain in the West, and has immunization clinics in virtually every location.

4. Kids Boost Immunity Funded By Big Pharma



Kids Boost Immunity relies on additional support to help purchase UNICEF vaccines earned by students. Our goal is to raise literacy about topics such as immunization, antibiotics and global health and funding from other supporters in no way influences the editorial choices around educational content posted on Kids Boost Immunity.

Canadian Commission for UNESCO
Commission canadienne pour l'UNESCO

Kids Boost Immunity is partnered with UNESCO and the U.N. It also is sponsored by companies by GlaxoSmithKline, Merck, Pfizer and Sanofi Pasteur. Are we seeing the common thread here?

5. Immunize Canada Funded By Pharmaceutical Companies

Immunize Canada is financed by the usual suspects. And taking a quick through its "member organization", many of them also receive money from those same groups.

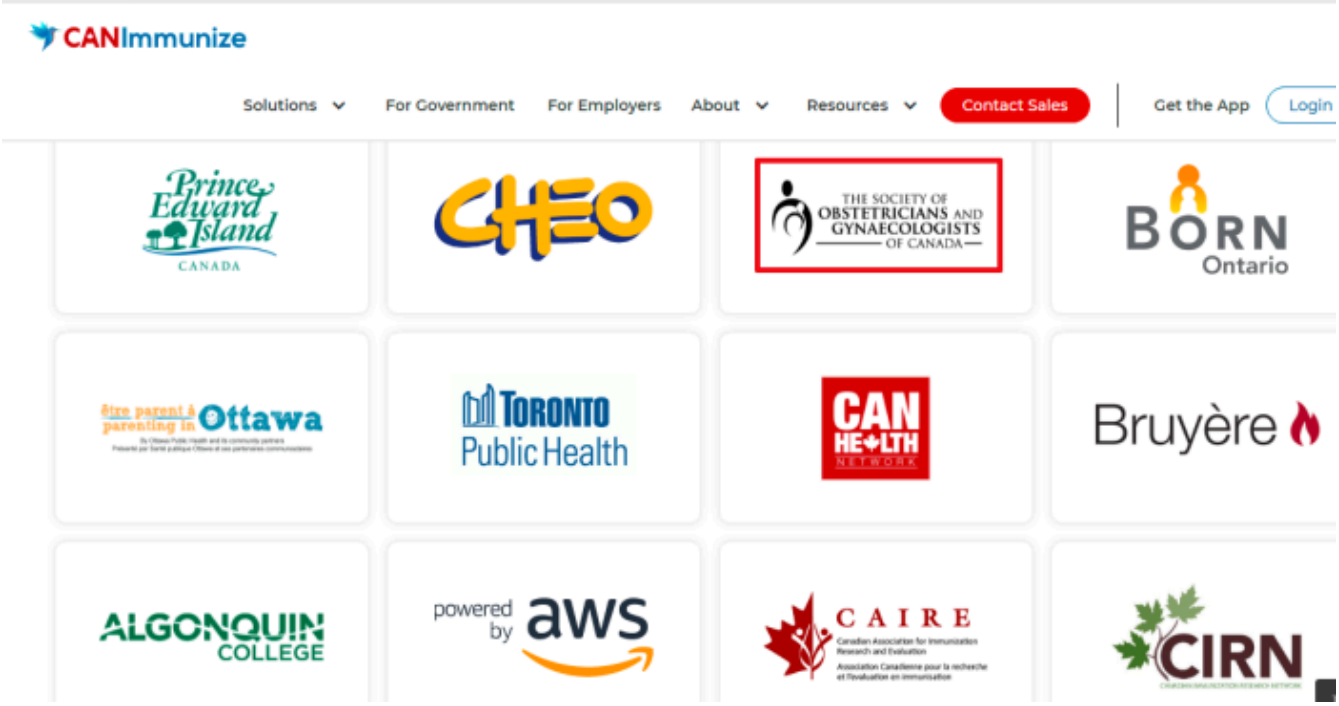
6. Vaccines411 Anonymous Referral Service For Vaccination

> Who We Are
> Vaccines411.ca is an ***online vaccination clinic locator which also includes reliable immunization resources for Canadians to easily find the vaccination resources they need***. The website was officially launched in May 2011. This free online service was created in order to facilitate the process of vaccination for the many Canadians who do not know where to turn to for this kind of information.

> Vaccines411® is ***managed by a dedicated team of professionals, which includes writers, researchers, translators, and developers. The content and resources provided on Vaccines411 is selected and reviewed by our team based on clarity, objectivity, and the credibility of its sources (i.e. government sourcing, medical reviews etc).*** However, please note that we are not healthcare professionals and that the information provided on Vaccines411.ca is designed to complement, not replace, the relationship between a patient and his/her healthcare professionals.

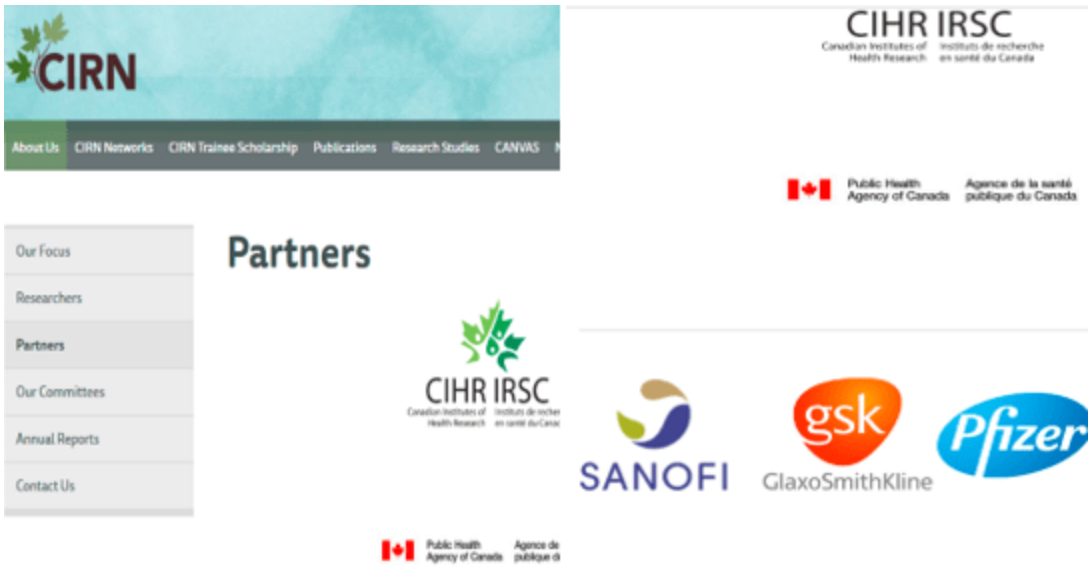
This is supposed to an online referral service, for people looking to get their shots. Although the names seem to be kept hidden, it's not difficult to imagine where the money comes from.

7. Society Of Obstetricians And Gynaecologists: Pregnant Women



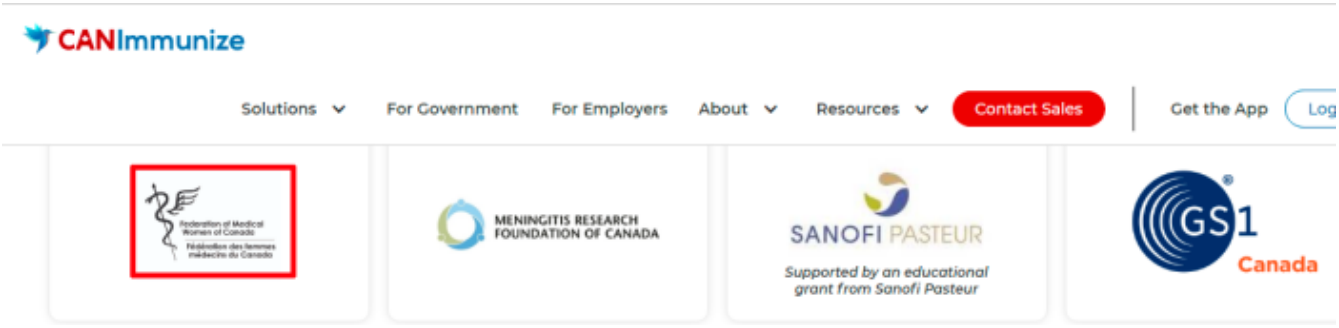
This was covered in an earlier article. The Society Of Obstetricians And Gynaecologists is supposed to be concerned with promoting the health and well being of women and children. Instead, its Pfizer money has likely contributed to the absurd recommendations with pregnant women.

8. Canada Immunization Research Network



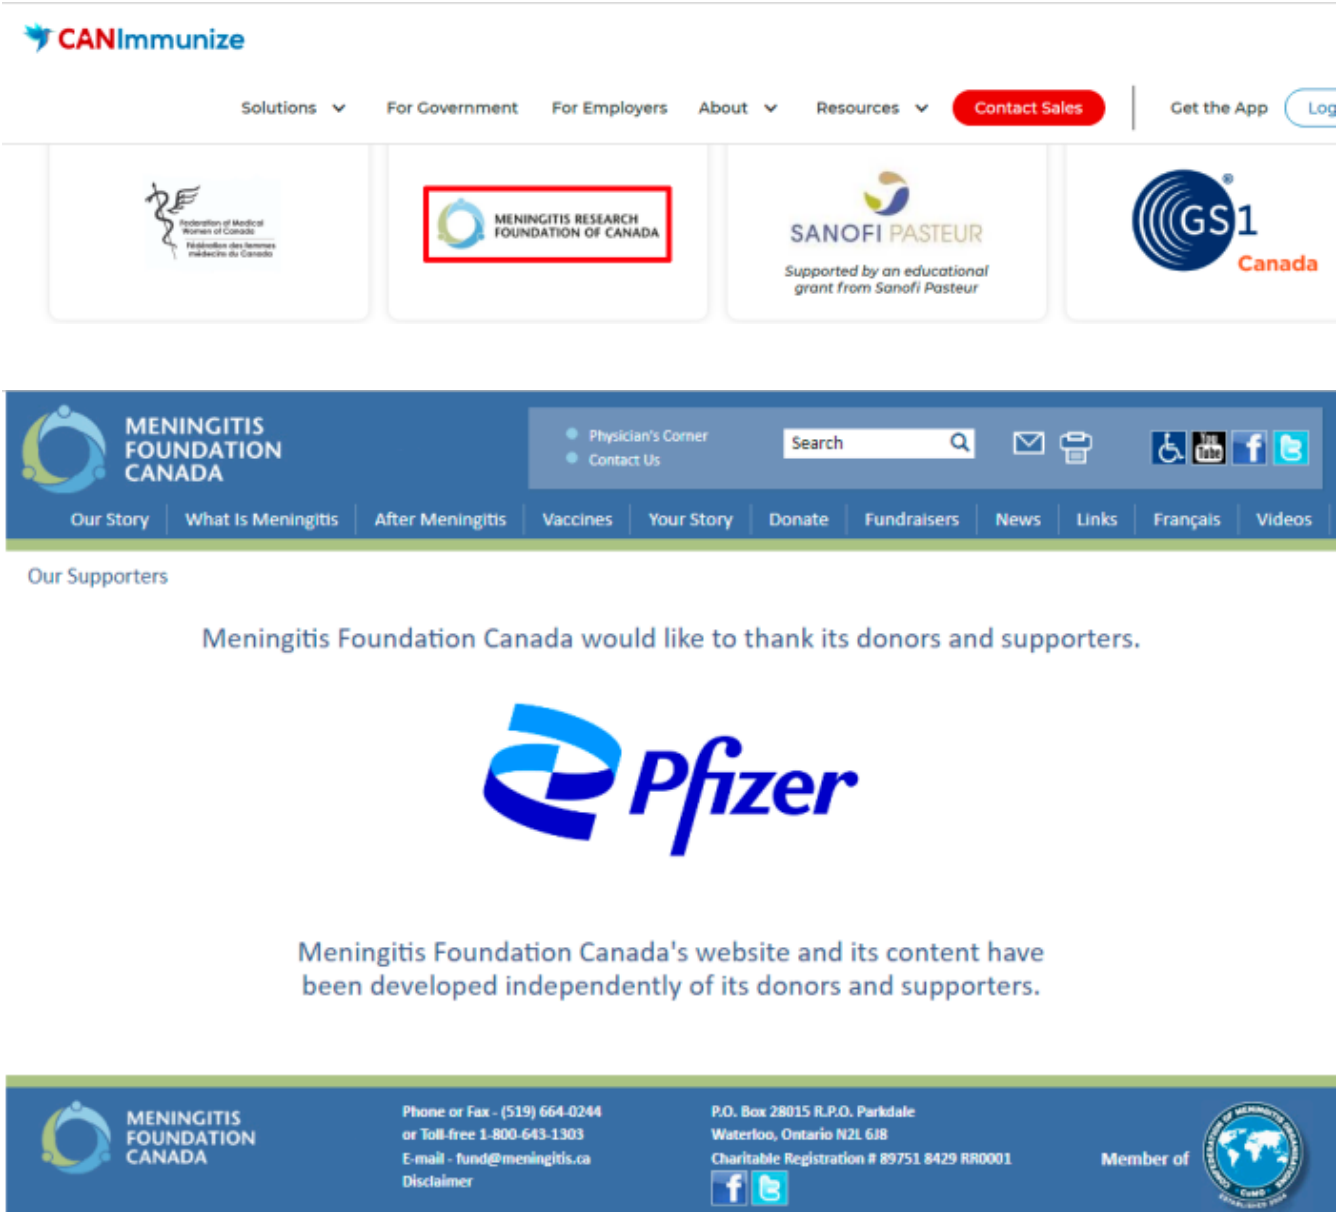
CIRN, the Canadian Immunization Research Network, is another group that has been previously covered on this site. Like the others, it supports CANImmunize too. This organization takes money from the public, and is supposed to be neutrally investigating and researching how safe and effective vaccines are. However, given the cash they also get from drug companies makes that suspicious.

9. Federation of Medical Women Of Canada, Funded By Pharma



The Federation of Medical Women of Canada (FMWC) is funded by by drug companies. That's pretty twisted, considering that pushing harmful medications on women will lead to far fewer of them alive.

10. Meningitis Foundation Canada, Funded By Pfizer



Now, this group, Meningitis Foundation Canada, probably has many donors. However, Pfizer has presumably contributed enough that it merits displaying it prominently across that main page. But don't worry, that won't impact whether or not certain therapeutics are recommended, or how often.

Enough about the donors and sponsors. The available information about the technology itself and the company is pretty chilling.

Kumanan Wilson, the CANImmunize Chief Executive Officer, say in his biography:

> An internal medicine physician, scientist and expert in digital health, Dr. Wilson is an internationally, widely published expert in public health and immunization and the founder of the CANImmunize project. ***Currently funded by the Bill & Melinda Gates Foundation and the World Health Organization*** Dr. Wilson's vision is to use technology to solve public health problems

In other words, his project is at least partially funded by WHO and the Gates Foundation. It's not like they have an agenda or anything.

If all of this isn't creepy enough, CANImmunize provides plenty of promotional material promotion their App, and vaccines in general. Some of this seems clearly targeted to children.

As for its privacy policies:

> CANImmunize ***will use your information to send you communications about vaccinations and other healthy behaviours, including information from integration partners such as local health authorities, updates about outbreaks near you if you choose to use location services, and periodic updates about CANImmunize Inc and its platforms***. You will be offered the ability to opt out or unsubscribe from these communications. If you have consented to sharing your information with one or more integration partners, CANImmunize will share it with them.

> CANImmunize may ***transfer your personal information, excluding health information (except in cases where you send us unsolicited health information – which we delete – outside of the platform such as through support channels), to domestic or international third parties including***, for example, IT services, for processing that furthers the purposes for which you consented to provide the personal information. These transferees will be required to maintain privacy and data security standards similar to our own. This sort of transfer is considered a use not a disclosure under Federal privacy legislation. For more information, see here: https://www.priv.gc.ca/en/privacy-topics/airports-and-borders/gl_dab_090127/.

> By creating an account and storing your immunization information in the app, ***you are also consenting to allow CANImmunize to use it in de-identified and/or aggregate form for research purposes in the health sector***. De-identified information is information about you, but it has been stripped of identifiers such as your name or date of birth and cannot be associated with you as an identifiable individual. ***Aggregate information is data combined from several measurements; when data is aggregated, groups of observations are replaced with summary statistics such that the data cannot be linked back to an identifiable individual***. This will happen only where the research has been approved by, and is protected by, the policies of a Research Ethics Board.

> CANImmunize will also use ***aggregate information to inform its understanding of trends*** in vaccination, opportunities to ***improve immunization rates or to generate other insights and may share this aggregate information with third parties***.

> Before CANImmunize uses or discloses your personal information for any other purpose, we will always ask for your consent.

Whether you want it or not, your medical information is available to be sold to 3rd parties for the purposes of research. Sure, your name and contact details may be purged, but you are part of future data compilation. It seems that this may be one of the biggest data harvests in history in Canada.

Again, by taking part and using the app, you are presumed to have consented. Now, if this limited assurance isn't enough for you, try out the terms of service:

> Use of CANImmunize is governed by these Terms of Use. ***We may amend or modify these Terms of Use at any time, without notice***. The current version of these Terms of Use will be available each time you access the website. ***By using CANImmunize, you agree to be bound by these Terms of Use and are responsible for reviewing these Terms of Use as well as the CANImmunize Privacy Policy***. You also agree that you will comply with all applicable laws and regulations when using CANImmunize and are prohibited from attempting to violate the security of the website. You should not use CANImmunize if you do not agree to these Terms of Use and the Privacy Policy, understand what they mean, or do not consent for your data to be used.

In other words, CANImmunize can change their terms at any time, without notice. On the other hand, the people using this app are expected to read and understand what's going on. Feels great, doesn't it?
